**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Anderson (US 3202937).

With respect to claim 10, Figure 3 of Anderson discloses a reference circuit for providing a reference voltage during a predetermined time interval comprising: a zener diode (40) for providing said reference voltage in response to a predetermined bias current when said zener diode is reverse biased, and a bias control circuit (36, 34, 26, 30, 24 and 22) for generating said predetermined bias current only during said predetermined time interval such that said zener diode provides said reference voltage only during said predetermined time interval (Note the predetermined time interval can be any range of time because it is not specified by the applicant. The discharge time of the capacitor indicates there is a predetermined time period in which the capacitor is discharging and providing the reference voltage. )

***Allowable Subject Matter***

3. Claims 1-9 are allowed.

Art Unit: 2816

With respect to claim 1, the prior art of record fails to disclose or suggest a saw tooth generator for generating a saw tooth waveform as a function of periodic pulse coupled to said generator comprising a first capacitor and a reference circuit including a zener diode as recited in the claim.

With respect to claim 9, the prior art of record fails to disclose or suggest a saw tooth generator including a first capacitor and a reference circuit including a zener diode as recited in the claim.
